## Tell me ONE thing that I should know about you-

One thing that you should no about me-One defining aspect about me is my unique blend of skills and experiences. With a background in both mechanical engineering and a year's experience as a software engineer in a SaaS company, I bring a diverse perspective to problem-solving. Passionate about innovating in the realms of data science, machine learning, and artificial intelligence, I am driven by the opportunity to bridge the gap between technology and real-world challenges

## What were you expecting to learn when you registered for this course?

2. acquire the hands-on skills necessary for implementing this human-centric approach in real-world scenarios. Overall, I sought to enhance my ability to approach challenges innovatively and contribute to projects with a user-focused and iterative mindset.

## Having participated in the first class what are the top three learning objectives that you will strive to achieve in this course?

- 1. Understanding the needs, thoughts, and feelings of the end-users and stakeholders is on thing that took my attention which I am interested in exploring.
- 2.Learn how to work effectively with various groups, like data scientists and engineers, to create AI and ML systems that consider multiple viewpoints.

  3.Get skilled at using a step-by-step approach systems, making them better over time through testing and continuous improvement.
